

ERA Hospitality Stack — Capability Brief

Document type: derived comparison brief (not a sell SSOT)

Audience: NotebookLM / partner comparison against Oracle Opera Cloud user guides

Language: English

Snapshot date: 2026-08-22

Edition of every product in this brief: `mvp` · **field pilot:** open · `pilot_ready` : false

Honesty rule. This document describes what the ERA stack *is built to do* and what is *actually shipped* in the current edition. It does **not** claim GA, certified fiscal, live OTA connectivity, or a shared multi-tenant SaaS hotel pool. For sell / show language use the Product-Readiness matrices, not this brief.

0. How to read this document

0.1 What this is

A single English inventory of the ERA hospitality stack — **Orchestrator (control plane)**, **Finance (accounting satellite)**, **Hotel PMS**, **Clinic / sanatorium**, and **F&B POS** — written so an analyst can compare it with Oracle Opera Cloud (and related Oracle Hospitality modules) without opening the monorepo.

0.2 What this is not

Do not treat this brief as...	Use instead
Permission to sell “GA hotel”	<code>docs/editions/hotel.yaml</code> + Hotel Product-Readiness Matrix
Proof that every listed screen is field-signed	<code>docs/COVERAGE_MATRIX.md</code> + UAT-SMOKE
A full commercial bank / ABS	Bank Capability Inventory (out of hospitality scope)
A clone of Opera Sales & Catering, OXI/OHIP, or OPERA Controls	Honest gap table in §11

0.3 Status tags used here

Tag	Meaning
SHIPPED	Doc + API + UI for the declared actor, plus a UI UAT-SMOKE path (not curl-only)
API	Backend and usually a screen exist; not accepted as SHIPPED (no UAT / Demo-TE)
STUB	Mock / env-gated / needs vendor cert or credentials
HEADLESS	Worker, webhook, cron, or browser extension — no SatAdmin card required
mvp / not GA	Product edition. Scaffold-green ≠ product acceptance. SHIPPED ≠ Pilot-ready

Actor columns in the living matrix: **OpsUI** (local staff login), **SatAdmin**, **OrgOwner** (SSO owner), **SuperAdmin** (orchestrator).

0.4 Source documents (SSOT)

Layer	Path

Hotel IA	era-hotel-pms/doc/MENU-IA-CANON.md
Hotel PRD	era-hotel-pms/PRD.md
Clinic PRD	era-clinic/PRD.md
F&B PRD	era-fnb-pos/PRD.md
Finance PRD	era-finance-core/PRD.md
Orchestrator PRD	era-orchestrator/PRD.md

1. Product thesis

ERA is not a standalone PMS. It is a **multi-satellite stack for an Azerbaijan hospitality property (or group)** where:

1. **Hotel PMS** owns guest-facing stay operations: book, assign, folio, night audit, housekeeping, B2B allotment, thin medical/SPA, banquets.
2. **Clinic** owns clinical operations: appointments, visits, procedures, ICD, lab, sanatorium planning — including the medical depth that a city-hotel PMS never ships.
3. **F&B POS** owns the restaurant floor: tables, tickets, KDS, shift close, room-charge to the hotel folio.
4. **Finance** owns accounting truth: GL, sales invoices / e-qaimə, warehouse, AR aging, purchases. Hotel and POS **hand off**; they do not duplicate ERP.
5. **Orchestrator** owns identity, SSO, entitlements, billing SKUs, MDM persons, workforce hire, and the satellite event bus.

The comparison implication vs Opera Cloud: Opera is a deep *hotel* PMS (plus OHIP for certified interfaces). A typical Opera property still buys SPA, clinic/HIS, restaurant POS, and local GL as separate products. ERA's bet is that a **wellness / medical / sanatorium resort** (and an unbranded city hotel that wants local fiscal + one owner cockpit) is better served by one control plane than by Opera + 4 vendors.

Pilot property shape: Nafta-class resort — hotel + restaurant + medical/sanatorium cycle — not an international branded chain (Hilton/Marriott often mandate Opera).

2. Architecture

2.1 Three planes

Plane	Product	Owns
Control plane	era-orchestrator	Identity launcher, SSO, RBAC, billing, entitlements, MDM API, satellite event ingest, org operating mode, workforce hub
Finance satellite	era-finance-core	GL, documents, inventory, HR/payroll (optional), tax, counterparty MDM for accounting
Industry satellites	era-hotel-pms , era-clinic , era-fnb-pos , ...	Vertical operational data only

Rule: cross-tenant, cross-satellite, or commercial logic → orchestrator. Ledger and accounting events → finance. Hotel does not become a second 1C.

2.2 Two tenancy axes (do not conflate)

Axis A — legal / money / POS

Need	Mechanism
Bar + restaurant, same VÖEN, same org	Multiple <code>Outlet</code> rows in the satellite DB
Clinic / shop as a department of the hotel	Orchestrator org <code>DEPARTMENT</code> + <code>parentOrgId</code> ; revenue / fiscal may route to PARENT ; ops data stays in that org's satellite rows
Separate legal entity	Separate org <code>STANDALONE</code> + unique <code>taxIdBlindIndex</code> (VÖEN)

Detach department → standalone changes **routing only**. No operational data migration.

Axis B — placement (`SHARED` / `DEDICATED` / `ONPREM`) is packaging, not the same as `DEPARTMENT`.

PlacementJob API is a **scaffold**. Live SHARED hotel SaaS pool and automated on-prem migrate are **not built**. Do not sell "SaaS pool".

2.3 Identity and login

Actor	Login	Org resolution
Operational staff (reception, waiter, maid, nurse)	Local form on the satellite (<code>/api/auth/login</code>)	Deployment-bound; no org picker
Owner / management	SSO from orchestrator launcher	Signed <code>organizationId</code> in SSO payload
Finance / platform user	Orchestrator or finance login	Membership; multi-org switcher for owners

SSO payload: HMAC `email|organizationId|expiresAt` . Local staff use `passwordHash` . SSO users use `sso:no-password` and cannot local-login.

Workforce hire master = orchestrator. Satellites consume `STAFF_PROVISIONED` and upsert a local user keyed on `cpEmploymentId`. Hotel admin "create user" is a secondary seat guard.

2.4 MDM (person identity)

- PII lives in orchestrator MDM (`era_mdm`): `GlobalNaturalPerson`, identifiers (FIN, passport + issuing country).
- Satellites store `globalPersonId` **only**. Hotel guest card shows a **masked** ops-profile. No local FIN/passport columns when MDM-linked.
- Guest create/edit links identity; merge supports foreigner → citizen when FIN is obtained.
- Production hotel templates set `ERA_HOTEL_GUEST_MDM_STRICT=true`.

2.5 Event bus

Satellites publish `POST /api/v1/satellite-events` (Bearer `SATELLITE_EVENT_SERVICE_TOKEN`). Queue: `era-satellite-events` (BullMQ). Envelope: `@era/contracts`.

Hospitality events that Finance consumes (live unless noted):

Event	Effect
<code>SATELLITE_HOTEL_NIGHT_AUDIT_CLOSED</code>	Multi-line NAS journal from <code>revenueLines</code> + GL map
<code>SATELLITE_HOTEL_INVOICE_ISSUED</code>	Draft sales invoice in Finance
<code>SATELLITE_HOTEL_CITY_LEDGER_SNAPSHOT</code>	Agency balance snapshot (<code>AgencyCityLedgerSnapshot</code>)
<code>SATELLITE_FB_STOCK_CONSUMPTION_COMPLETED</code>	WIP / COGS journal
<code>SATELLITE_FB_SALE_COMPLETED</code>	Revenue journal on <code>LOCAL_CASHIER</code> pay (not room-charge / hub)
<code>SATELLITE_FB_SHIFT_CLOSED</code>	Cash recon log meta (stub-ish)
<code>SATELLITE_CLINIC_VISIT_COMPLETED</code>	Visit revenue path
<code>SATELLITE_CLINIC_LAB_ORDER_COMPLETED</code>	Lab revenue path
<code>SATELLITE_CLINIC_PROCEDURE_COMPLETED</code>	Procedure TTK lines → Finance <code>adjustStock</code> (warn + post)

2.6 Localization (Azerbaijan)

- Currency **AZN**; display timezone **Asia/Baku**; UTC in DB.
- Legal entity **VÖEN** (10 digits); citizen **FIN** (7 chars, no I/O).
- Foreigners: passport + `issuingCountry` until residency.
- Fiscal guest receipt (KKM / NBC) is **STUB** in this edition. e-qaimə (e-invoice) is a Finance concern; hotel folio shows a read-only stub (HOT-04).

3. Edition snapshot (sell honesty)

Product	Edition file	Status	Pilot ready	Sell / show one-liner
---------	--------------	--------	-------------	-----------------------

Platform / Orchestrator	platform.yaml	mvp	false	Control plane + MDM + billing + workforce; topology hop/pool not live
Hotel PMS	hotel.yaml	mvp	false	FO + City Ledger showable (UI/Demo green). Pilot open. KKM STUB. Not GA
Clinic	clinic.yaml	mvp	false	Do not claim GA — fiscal / HL7 STUB; pilot open
F&B POS	fnb.yaml	mvp	false	Floor / KDS / admin showable at 🟡; pilot open
Finance	finance.yaml	mvp	false	GL / events MVP; many FIN-* still API-only

Forbidden claims in this edition: “ready”, “GA”, “certified KKM”, “live Booking.com/Expedia sync”, “SHARED hotel SaaS pool”, “full Opera replacement”, “full commercial HIS”.

Allowed show language: “FO + City Ledger MVP showable; medical/sanatorium + POS + Finance in one stack; field pilot open.”

4. Hotel PMS — era-hotel-pms

Entitlement gate: industry_hotel_pms

Commercial modules: see §10

IA rule: shift sections, not an ElektraWeb clone. FO= /fo/ , HK= /hk/ , Cash= /front-cash/ , NA= /night-audit/ , Distribution= /distribution/ , Settings= /settings/ . Finance / Clinic / POS are **external deep links**.

Benchmark mix (honest): Opera Cloud for folio / night-audit *patterns*; Mews for modern UX density; ElektraWeb for Azerbaijan/Turkey market parity (not a pixel clone).

4.1 Front Office (SHOW / SHIPPED)

Working home: stay lifecycle.

Screen	Path	What it does
Room-type availability	/fo/availability	Sellable Avl / Occ; create blocked when Avl = 0
Reservation list	/fo/reservations	Stay queue: filters, notes, assign, check-in
Room rack	/fo/rack	Door tiles: HK status, in-house, quick actions
Room plan	/fo/room-plan	Timeline bars; relocate / extend; share-twin lanes
Groups	/fo/groups	Booking envelope (group)
In-house	/fo/in-house	In-house guests → card / folio
Room changes	/fo/room-changes	Move plans
Agency inbox	/fo/agency-inbox	Confirm / decline OPTION stays from agency portal (API , not SHOW)
Reservation card	modal / editor	Agency-first layout; assignment by stage; Additional collapsed
Guest card	GuestCardModal	MDM link + masked FIN/passport; merge

Booking model (SHIPPED): hierarchy **Block** → **Booking** → **RoomStay**. Pickup from allotment. MASTER folio routing. Allotment cutoff soft-release is **HEADLESS** cron.

Shared twin (HOT-FO-03): `shareEligible` + M/F pool + door inventory on card / room-plan / rack. Status **API** — UAT-SMOKE \$30 not signed, so not SHIPPED.

4.2 Front Cash, folio, City Ledger (SHOW / SHIPPED)

This is the area closest to Opera cashing — and the one ERA treats as a first-class ops product, not an ERP screen.

Capability	ID	Status	Notes
Folio settle multi-tender	HOT-CASH-01	SHIPPED	CASH / CARD / COMPANY / LOYALTY / DEPOSIT / BANK_TRANSFER (+ bankReference; match in Finance)
Unified pending hub	HOT-CASH-02	SHIPPED	F&B + clinic walk-in pay at reception (/front-cash/pending). Not the clinic cashier
Front-cash journal + shift Z	HOT-CASH-06	SHIPPED	Ops Z packet — not fiscal KKM Z
Deposit hold / apply / refund	HOT-CASH-03	SHIPPED	Apply at check-in and settle / checkout
Payment refunds	HOT-CASH-04	SHIPPED	Mock fiscal; blocked after TRANSFERRED_AR
Checkout discounts	HOT-CASH-05	SHIPPED	Manual + automatic promo
Checkout close (zero balance)	HOT-CO-01	SHIPPED	Guest must settle
Transfer balance to City Ledger	HOT-CO-02	SHIPPED	Credit / contract gate → <code>PENDING_AR</code>
Per-guest folio close	HOT-CO-03	SHIPPED	Selective close
Early checkout unused-nights refund	HOT-CO-04	SHIPPED	Net of 18% VAT, default CASH; all folios reverse
Folio routing	HOT-CL-01	SHIPPED	Revenue → GUEST / COMPANY / AGENCY; stay overrides beat property rules
Credit limit on stay / room charge	HOT-CL-02	SHIPPED	Used by CL gate
Agency CL ops snapshot	HOT-CL-03	SHIPPED	<code>/front-cash/agency-ledger</code>
CL → Finance snapshot	HOT-CL-04	SHIPPED	Re-push + Finance deep link
Terms / aging / invoice matching	HOT-CL-05	SHIPPED	Owned by Finance , not duplicated in PMS
Agency prepaid / postpaid + refunds	HOT-AG-02	SHIPPED	Bank match in Finance

Folio windows: ERA uses **routing rules + stay overrides + MASTER folio**, not Opera's 8 named folio windows (1–8) as a first-class object. Functionally similar for "guest vs company vs agency"; not a window-for-window clone.

City Ledger vs Opera AR: hotel keeps **operational** CL (opening, charges, payments, checkout transfer). Finance keeps **AR aging, allocation, e-invoice**. This is an explicit product boundary, not a missing screen.

4.3 Night Audit (SHOW / SHIPPED)

Capability	ID	Status
EOD: post room / package, roll business day, emit E1	HOT-NA-01	SHIPPED
Polish: exceptions, auto no-show, trial	HOT-NA-02	SHIPPED
EOD reports hub + CSV (cancel / create / folio tx / price control / no-show / room-move / VIP)	HOT-NA-03	SHIPPED
Reservation updates filter + CSV	HOT-NA-04	SHIPPED
End of year close / open	HOT-NA-05	STUB (YEAR_END_NOT_ENABLED)

Night Audit is an operational day-close, not a GL close. GL posts from `SATELLITE_HOTEL_NIGHT_AUDIT_CLOSED`.

4.4 Housekeeping (SHOW)

Screen	Path
HK board (DIRTY → CLEAN → INSPECTED)	<code>/hk</code>
Maid mobile	<code>/hk/mobile</code>
Minibar	<code>/hk/minibar</code>
Maid shifts / assignment	<code>/hk/maids</code>
OOO / closed rooms	<code>/hk/closed-rooms</code>
Lost & found	<code>/hk/lost-and-found</code>

Local stock MVP for HK consumption: `/settings/stock` (deep link to Finance warehouse for real inventory).

4.5 Distribution, B2B, yield

Capability	ID	Status	Notes
Local channel manager	HOT-CH-01	SHIPPED	Mappings, stop-sell, sync journal, OTA cancel by ref, health
Live OTA ARI (Booking.com / Expedia / Exely)	HOT-CH-02	STUB	Env-gated dry-run; no vendor creds in this edition
Tour agency contracts + commission %	HOT-AG-01	SHIPPED	

Allotment blocks + pickup	HOT-BOOK-01	SHIPPED	Cutoff cron HEADLESS
Occupancy / load / child pricing flags	HOT-OCC-01	SHIPPED	Flags default OFF; 2nd/3rd adult, extra bed, child matrix
Yield rules (load %)	part of HOT-OCC-01	SHIPPED	Applied only if load flag ON
Pricing components (fee / meals / COGS versions)	HOT-PC-01	SHIPPED	Version history + audit
Package sell + costFloor versions	HOT-PKG-01	SHIPPED	
Auto-BAR from production calendar	M24	SHIPPED	Nightly /api/cron/auto-bar ; dayType + MANUAL lock
Unit economics (CPOR / BEP / below-floor)	HOT-UE-01	API	Phase A proxy; Finance CPOR later
Agency portal book	HOT-AGP-01	API	B2B extranet; AUTO default OFF → OPTION
FO agency inbox	HOT-AGP-02	API	Confirm → CONFIRMED; decline → CANCELLED
Optional passport scan on agency book	HOT-AGP-03	API	Not KBS

Yield honesty vs Opera: ERA has BAR calendar, occupancy/load flags, child matrix, and auto-BAR from a production calendar. It does **not** claim Opera-class hurdle rates, best-available-rate strategy trees, or a certified CRS. Live channel push is a stub.

4.6 Banquets, transfers, service, migration

Area	Path	Status	Honesty
Banquets / BEO	/banquets*	SHIPPED (HOT-BEO-01)	Lines, resources, staff, settlement, calendar, event P&L. Not full Opera S&C (blocks, function diary, BEO change-log at Opera depth)
Transfers	/transfers , /transfers/airport	SHIPPED (HOT-XFER-01)	Charge via postCharge routing; cancel / void
Service / maintenance WO	/service , /service/guest	SHIPPED (PRD M23)	Staff + guest request form
Migration PRO	/migration	module hotel_migration_pro	AZ police / registration queue
ElektraWeb historical import	/settings/import	SHIPPED (HOT-05)	SuperAdmin
ElektraWeb live bridge	extension + ingest API	HEADLESS (HOT-06)	Dual-run; no SatAdmin card

4.7 Hotel-thin medical / SPA

Hotel owns **scheduling surfaces**; Clinic owns **clinical record**.

Screen	Path	Role
Procedures	/procedures	Sanatorium procedure slots
SPA reservations	/spa/reservations	SPA book list
Staff match	/spa/staff-match	Therapist matching
Places / cabinets	/spa/places	Resource rooms
Medical (thin)	/medical	Jump / thin hotel medical

Deep lab, ICD, nurse roster, contraindications, procedure TTK → **Clinic**.

4.8 Guest loyalty

PRD: guest loyalty tiers via platform hook `platform_loyalty` — **DONE** as a platform hook, not an Opera-class loyalty engine (points, tiers, stay-based earn/burn across a brand).

4.9 Management reports (API — not SHIPPED)

Catalog inspired by ElektraWeb WA0058/59 + Nafta nightly pack. Screens and PDFs exist; **no UAT evidence** → **not SHIPPED**.

Hub	Path	Contents
Reports	/reports	Category tiles + shared period
Analysis	/reports/analysis	Cubes (P2)
Occupancy	/reports/occupancy	Forecast / annual / monthly-daily + PDF
Daily flash	/reports/daily	Daily management + in-house + PDF
Financial (ops)	/reports/financial	Trial balance period, cash, folio tx, department revenues — ops , not Finance GL
Agency	/reports/agency	Profitability / market
Booking	/reports/booking	Planned create/cancel/CRM
Nightly ZIP	/reports/nightly-pack	Configurable pack after NA; cron sends link (HEADLESS)

4.10 Hotel gaps vs a full Opera Cloud property

Opera-class area	ERA today
27 folio styles / 8 folio windows	Routing + MASTER folio; fewer print styles
Certified PMS↔CRS / OHIP	Local CM SHIPPED; live OTA STUB
Multi-property chain + central reservation	Org + holding in Finance / CP; not Opera Cloud multi-property
Sales & Catering depth	BEO MVP only
Year-end calendar	STUB
Fiscal / KKM certified	STUB
Management report acceptance	API / screens, not SHIPPED

Agency extranet	API, not SHOW
Shared-twin UAT	API
Brand / franchise mandated interfaces	Out of scope for Nafta-class

5. Clinic / sanatorium — era-clinic

Entitlement: `industry_clinic` (+ hotel bundle for sanatorium).

There is no `industry_hospital` **tile.** Hospital pack = same satellite + inpatient modules (future).

5.1 Product lines (presets)

Product line	<code>Outlet.preset</code>	Gate	Notes
ERA Clinic Outpatient	<code>outpatient</code>	<code>industry_clinic</code>	Polyclinic, diagnostics — core
ERA Clinic Inpatient Day	<code>inpatient_day</code>	+ future <code>clinic_inpatient_day</code>	Ward-lite; not full HIS. Current inpatient is a stub until Phase 4
ERA Sanatorium Clinical	<code>sanatorium_clinical</code>	clinic + hotel bundle	Requires <code>era-hotel-pms</code> + bus
ERA Wellness	<code>wellness</code>	<code>industry_clinic</code>	Scheduling + resources, no EMR

Sanatorium **business** = entitlements `industry_hotel_pms` + `industry_clinic` (+ optional retail). Not a standalone sanatorium satellite.

5.2 In-scope clinical operations

Area	Surfaces	Status (readiness)
Ops home / appointments / nurse	<code>/</code> , <code>/appointments</code> , <code>/nurse</code>	UI
Nurse / lab monthly rotation	<code>/sanatorium/nurse-roster</code>	UI
Sanatorium MK5	<code>/sanatorium</code>	UI
Patient card (after contraindications)	<code>/patients/[id]</code>	UI
Visit / inpatient	<code>/visits/[id]</code> , <code>/inpatient</code>	UI
Diagnosis report	<code>/reports/diagnoses</code>	UI
ICD favorites	<code>/admin/icd-favorites</code>	UI
SatAdmin catalogs	<code>/admin/*</code>	UI
Cashier	<code>/cashier</code>	UI
Print	<code>/print/*</code>	UI
Procedure TTK BOM	<code>/admin/master-data</code>	API (CLI-47; UAT open)

Procedure planning: program / package quotas expand to `PROPOSED` procedure orders; doctor confirms; FIFO placement onto resources (`placeConfirmedProcedures`). Time layers: occupancy vs cabin resource gap vs guest rest vs pair rules (`resourceGapMinutes` , `patientRestMinutes`).

Hotel capacity foresight (CLI-27, SHIPPED): clinic reads hotel capacity; soft warn at $\leq 15\%$ remaining; critical blocks medical booking; bus `CAPACITY_CHANGED` .

Workforce (CLI-WF-01, SHIPPED): CP hire → clinic `DOCTOR` login.

5.3 Explicitly out of clinic v1

Full HIS (OR, MAR, ward pharmacy, DRG), production HL7/FHIR, DICOM/PACS, national e-recept, full EMR, full insurance TPA / pre-auth, pharmacy warehouse (Finance or retail — **not** procedure TTK).

Fiscal / HL7: **STUB**. Edition `mvp` , pilot open, do not claim GA.

6. F&B POS — `era-fnb-pos`

Role: restaurant satellite. Floor / ticket / KDS / shift live here — never in PMS or ERP.

ID	Capability	Status
FNB-01	CARD pay + shift	SHIPPED
FNB-02	Real KKM / NBC	STUB (mock)
FNB-03	Admin modal CRUD (menu categories/items, tables)	SHIPPED
FNB-04	Menu price history	SHIPPED
FNB-05	Standalone sale / shift → Finance GL	SHIPPED (LOCAL_CASHIER only; hotel paths via NA)
FNB-06	Recipe SKU + Finance deep-link (BOM SoT in Finance)	SHIPPED
FNB-07	Dish image URL (no upload)	SHIPPED
M11	KDS course timing	DONE (PRD)
M12	Recipe / BOH depletion engine	DONE — posting → Finance
M13	Delivery aggregator inbox	DONE as platform <code>delivery</code> (not a full Wolt/Glovo cert)
M14	Labor roster / PIN clock	DONE

Room charge: `POST /api/pms/room-charge` into hotel-pms. Reception can collect café tickets on `/front-cash/pending` .

Banquet extras: fb-pos tickets with `beoId` — extras on event day; base package on PMS master folio.

Out of F&B v1: PMS chessboard, medical, SPA POS, local warehouse/GL, dark kitchen, full iiko/rKeeper clone, split bill (deferred).

Readiness: UI  , Demo  , edition `mvp` , pilot open.

7. Finance — era-finance-core

Finance is the **accounting data plane**, not the SaaS front door. Registration, launcher, and billing SoT stay on the orchestrator.

7.1 What hospitality needs from Finance

Need	Finance home	Hotel / POS role
Sales invoices / e-qaimā / AR	/sales/invoices	Hotel /reports/invoices list + integrateToAccounting + deep link
Agency AR / aging / allocate	/crm/counterparties , /reporting/aging	Hotel snapshot + checkout PENDING_AR / TRANSFERRED_AR
Purchases / PO	/purchases	Not in hotel
Warehouse / stock	/inventory/*	Hotel local HK MVP only; clinic TTK write-off via event
GL journals from NA / POS / clinic	event consumers	Satellites emit; Finance posts atomically
Bank apply / match	bank modules	Folio BANK_TRANSFER reference

7.2 Core finance product (honest)

- Double-entry GL; adjusting journals (FIN-GL-02 SHIPPED).
- Holdings: multi-org consolidation to holding base currency (AZN) via CBAR; monthly-slice P&L.
- Inventory including statutory Forma-5 / Forma-2 PDF (**API**).
- Tax declarations (simplified / profit / payroll) — **API**, tax_pro ; property file export pending.
- Counterparty CRM for accounting (not hotel guest CRM).
- Optional payroll mirror from CP workforce (hr_full).
- Many FIN-* rows remain **API-only**. Edition mvp . Demo ❌ on Finance Product-Readiness.

7.3 What Finance is not

Not a PMS. Not a POS. Not the identity provider. Not a replacement for Opera's cashiering UI — that UI is in Hotel Front Cash.

8. Orchestrator / platform — era-orchestrator

8.1 Modules (PRD)

ID	Module	Status
M1	Auth (login, refresh, SSO)	DONE
M2	Membership API	DONE
M3	Entitlements validate	DONE
M4	Satellite events ingress	DONE

M5	Access request / transfer ownership	DONE
M6	Ownership dispute	DONE
M7	Billing & subscription SoT	DONE
M8	Platform add-ons (notifications, booking, ...)	Live
M9	Launcher web	DONE

8.2 Workforce hub (SHIPPED / API mix)

Hire, org units, positions, absences (7 Azerbaijan Labour Code kinds), vacation plans, personnel-order PDF, ştat (staff schedule) PDF, timesheets, CSV import/export, seat licensing + Security Admin, masked FIN on employments.

Several PDF / approve flows are **API** until UAT-SMOKE. Hire → satellite provision is **SHIPPED** for clinic (and the same pattern for hotel).

8.3 Platform add-ons relevant to hospitality

Add-on	Role
platform_workforce	CP hire / absence / seats
platform_loyalty	Hotel loyalty hook
platform_notifications_pro	Guest notify path — hotel HOT-03 is still STUB (Twilio/SendGrid)
delivery	F&B aggregator inbox
Booking add-on	Platform booking (not Opera CRS)

8.4 Topology honesty (repeat)

Bind + runtime-config Sync + PlacementJob API scaffold exist. Live SHARED pool ops and automated migrate **do not**. License defaults follow `deploymentTopology`. Do not sell as multi-tenant Opera Cloud equivalent.

9. Cross-stack journeys (the actual product)

These journeys are why ERA is comparable to “Opera + POS + SPA + 1C”, not to Opera alone.

9.1 In-house guest dines and charges the room

1. Waiter opens a table on F&B POS, fires KDS, pays **room charge**.
2. Hotel posts a folio charge via PMS bridge (routing rules apply).
3. Night Audit includes the charge in the business day and emits `SATELLITE_HOTEL_NIGHT_AUDIT_CLOSED`.
4. Finance posts NAS journal lines. Standalone café cash (LOCAL_CASHIER) can also emit `SATELLITE_FB_SALE_COMPLETED` without a stay.

9.2 Walk-in café or clinic paid at reception

1. F&B or Clinic creates a pending settlement (`POS_BRIDGE_SECRET`).
2. Reception pays or voids on `/front-cash/pending` .
3. Callback confirms to the source satellite. This is **one cash desk**, not three.

9.3 Agency group checkout to city ledger

1. Stay routing sends room + extras to AGENCY.
2. Checkout transfers remaining balance to CL (`PENDING_AR`) after credit/contract gate.
3. Hotel pushes `SATELLITE_HOTEL_CITY_LEDGER_SNAPSHOT` .
4. Finance ages and allocates invoices. Hotel does not invent a second AR.

9.4 Sanatorium stay + procedures

1. Guest is a hotel stay **and** a clinic patient (`globalPersonId`).
2. Doctor confirms proposed procedures; FIFO scheduler places them with resource-gap and rest rules.
3. CLI-27 blocks booking when hotel remaining capacity is critical.
4. Completed procedure emits TTK consumable lines → Finance stock (CLI-47 API).
5. Walk-in clinical charges can settle at hotel Front Cash.

9.5 Department clinic under hotel VÖEN

Clinic org `DEPARTMENT` of hotel: operational rows stay in clinic; revenue / fiscal **may** route to parent. Detach later without migrating stays or visits.

9.6 Owner cockpit

Owner SSO into launcher → Hotel executive / unit-economics (API), Clinic revenue summary, Finance holdings P&L, workforce seats. One identity, several satellites.

10. Hotel commercial modules (SKU)

Satellite gate: `industry_hotel_pms` . Billable keys (not 12 fine-grained leftovers):

Key	Human name	Typical contents
<code>hotel_core</code>	PMS Core	Front Office, Front Cash, Night Audit
<code>hotel_housekeeping</code>	Housekeeping & Room Rack	<code>/hk/*</code>
<code>hotel_service</code>	Service & maintenance	<code>/service</code>
<code>hotel_migration_pro</code>	Migration PRO	AZ registration queue
<code>hotel_transfers</code>	Transfers	Airport / fleet
<code>hotel_spa_scheduling</code>	SPA & Scheduling	<code>/spa/*</code> , <code>/procedures</code>
<code>hotel_distribution</code>	Distribution	Channel manager, contracts, yield

hotel_agency_portal	Agency Portal	B2B extranet — sold separately , not in default City/Resort/Sanatorium bundles
hotel_guest_experience	Guest Profiles & Tasks	Guest card / tasks
hotel_banquets	Banquets & BEO	/banquets*
hotel_medical_sanatorium	Medical & Sanatorium	Hotel-thin /medical
hotel_setup_advanced	Advanced master data	Deep settings

Clinic gate `industry_clinic` is a **separate satellite SKU**, not a hotel submodule. That is the architectural difference vs “Opera + OPERA Controls flag for activities”.

11. Comparison axes vs Oracle Opera Cloud

Use this section in NotebookLM as the scoring rubric. Scores are qualitative and edition-honest.

11.1 Where Opera Cloud is deeper today

Axis	Why Opera wins
Pure hotel cashiering taxonomy	Folio windows, 20+ folio styles, cashier shifts as a 30-year product
Group / block sophistication	Master / sub-blocks, wash, cutoff, pickup at chain scale
Rate engine	BAR / hurdle / restriction trees, occupancy-driven strategy as default
Channel / CRS	Certified OHIP adapters; live ARI to major OTAs
Multi-property / brand	Native chain, central reservation, franchise reporting
Sales & Catering	Function diary, BEO versions, banquet forecast
Interface marketplace	1,000+ certified vendors (locks, TV, PBX, key cards)
Page Composer / OPERA Controls	Field-level UI composition + thousands of flags

11.2 Where ERA is structurally different (and often stronger for this market)

Axis	Why ERA is the better fit for a Nafta-class / wellness property
Medical / sanatorium	First-class clinic satellite: ICD, contraindications, doctor-confirmed FIFO, nurse roster, capacity gate vs hotel occupancy
One cash desk across hotel + café + clinic	Unified Front Cash pending hub
Accounting boundary	Real GL + e-qaimə + warehouse in the same vendor; not “export to 1C and hope”
Identity	MDM person (FIN/passport) shared across hotel guest and clinic patient
Org operating mode	DEPARTMENT clinic under hotel VÖEN without merging databases
Workforce	CP hire → satellite role provision; Labour Code absence kinds
Localization	AZN, VÖEN, FIN, Baku TZ, migration/police queue as a SKU

Owner UX	One launcher, not Opera + iiko + Medesk + 1C passwords
TCO	No Oracle Hospitality list price, no OHIP interface tax, no Opera Cloud Foundation vs Premium feature gating

11.3 Where both are incomplete (do not bluff)

Axis	Opera	ERA
Certified AZ KKM / NBC	via local fiscal vendor	STUB
Live OTA without a channel manager	OHIP / OXI (paid)	Local CM yes; live ARI STUB
Full HIS	not Opera's job	not clinic v1
Field-proven GA at this property	decades	pilot open

11.4 Recommended NotebookLM questions

1. For each Opera Cloud cashiering object (folio window, deposit, city ledger, night audit), what is the ERA equivalent and who owns the GL?
2. Which Opera S&C objects have no ERA counterpart beyond BEO MVP?
3. Which ERA clinic / sanatorium objects have **no** Opera Cloud counterpart?
4. What must be true (KKM, live OTA, Pilot field) before ERA can be shown as a replacement rather than a parallel stack?
5. For a TABIA/PMD-class group: which properties are Opera-mandated (brand) vs ERA-fit (wellness / unbranded / medical)?

12. Compact capability index

Statuses below are a snapshot of `docs/COVERAGE_MATRIX.md` and Product-Readiness on 2026-08-22. When they disagree, **the matrix files win**.

12.1 Hotel

ID	Capability	Status
HOT-01	Master data CRUD	SHIPPED
HOT-02	BAR rates Excel import	BLOCKED (Nafta Excel out of AC; dynamic plans only)
HOT-03	Guest notify	STUB
HOT-04	e-qaimé on folio	STUB
HOT-05	ElektraWeb import	SHIPPED (SuperAdmin)
HOT-06	ElektraWeb live bridge	HEADLESS
HOT-MDM-01/02	Guest MDM link + masked profile	SHIPPED
HOT-BOOK-01	Block → Booking → RoomStay	SHIPPED

HOT-BOOK-02	Reservation card Phase 0	SHIPPED
HOT-BOOK-03	Allotment cutoff cron	HEADLESS
HOT-FO-01/02	Availability + sellable preview	SHIPPED
HOT-FO-03	Shared twin	API
HOT-CASH-01..06	Settle, pending, journal, deposit, refund, discount	SHIPPED
HOT-CO-01..04	Checkout, CL transfer, per-guest close, unused-nights	SHIPPED
HOT-CL-01..05	Routing, credit, agency CL, Finance snapshot, aging	SHIPPED
HOT-NA-01..04	Night audit + EOD + updates	SHIPPED
HOT-NA-05	Year-end	STUB
HOT-RPT-01/02	Management reports + nightly ZIP	API
HOT-XFER-01	Transfers	SHIPPED
HOT-BEO-01	Banquets BEO	SHIPPED
HOT-AG-01/02	Contracts + agency settlement	SHIPPED
HOT-AGP-01..03	Agency portal	API
HOT-PC-01	Pricing components	SHIPPED
HOT-OCC-01	Occupancy / child / yield flags	SHIPPED
HOT-PKG-01	Package sell versions	SHIPPED
HOT-UE-01	Unit economics	API
HOT-CH-01	Local channel manager	SHIPPED
HOT-CH-02	Live OTA ARI	STUB
HOT-UI-01	List filters	SHIPPED

12.2 Clinic / platform workforce (hospitality-relevant)

ID	Capability	Status
CLI-27	Hotel capacity foresight	SHIPPED
CLI-47	Procedure TTK → Finance stock	API
CLI-WF-01	Practitioner hire → clinic login	SHIPPED
CP-WF-HUB-01	Workforce hub E2E	SHIPPED
CP-WF-* PDF / ştat / vacation / timesheet	Approve + PDF	API (UI landed)

12.3 F&B

ID	Capability	Status
FNB-01	Card pay + shift	SHIPPED

FNB-02	Real KKM	STUB
FNB-03..07	Admin CRUD, price history, GL sale, recipe, image URL	SHIPPED

12.4 Orchestrator

ID	Capability	Status
ORCH-01	Workspace launcher + SSO	SHIPPED
CP-LAUNCH-01	Launch URL from SatelliteEndpoint	API
CP-WF-EMP/ABS/ORG/POS	Employment, absence, org tree, positions	UI landed / API until UAT

13. UI map (hotel shift IA)

Sidebar order: Front Office → Front Cash → Night Audit → Housekeeping → Guests → Distribution → Service → Migration → SPA → Transfers → Banquets → Medical → Reports → Settings → external (POS, Retail, Finance, Clinic).

Work class	Home
Sell / book / stay	/fo
Stay pay + café/clinic walk-in + agency CL	/front-cash
Day close	/night-audit
Management PDFs / ZIP	/reports (API acceptance)
Cleaning / OOO / L&F	/hk
OTA + B2B + quotas	/distribution
Guest profile	/guests
GL / AR / e-invoice	Finance
POS / digital menu	F&B
Lab / deep medical	Clinic

i18n: new screens require **en + az + ru**.

14. Closing statement for analysts

ERA's hotel satellite is already a **dense operational PMS** (folio, city ledger, night audit, HK, B2B allotment, BEO MVP, local channel manager). Marketing screenshots of Opera Cloud look "light" because Alta + Page Composer hide density; Opera's *user guides* are still deeper on chain hotel mechanics.

ERA's distinctive claim is not "we have more folio styles than Oracle". It is:

One stack for a medical/wellness resort: stay + procedures + restaurant + local GL + one owner identity — with honest stubs where the law or a vendor is not yet wired.

Until Pilot field is signed, KKM is live, and live OTA is more than a dry-run, the correct commercial sentence is **MVP showable**, not **Opera replacement**.

End of brief. Snapshot 2026-08-22. Update this file when editions or COVERAGE rows that affect hospitality sell claims change.
